# Brisk Cooling Technology

HyperKewl™ Evaporative Cooling products utilize a unique chemistry to achieve rapid absorption and stable water storage. The chemical formulation also creates enhanced evaporation. Our HyperKewl™ fabric combined with our three-layer design helps to cool the user while they stay dry!

## EVAPORATIVE COOLING TECHNOLOGY

- \\ Specialized fabrics and fibers create an advanced water management system, called 'HyperKewl'.
- \\ HyperKewl absorbs, stores and releases water within the multi-layered structure.
- \\ The fabrics cool itself through evaporation and a chill effect is created.
- \\ Users can expect the evaporative cooling fabric to provide temperatures that are up to 15-20° cooler than the ambient temperature.
